

Opel 1.7, 2.0, 2.2 Ltr. VP-pump with one plug

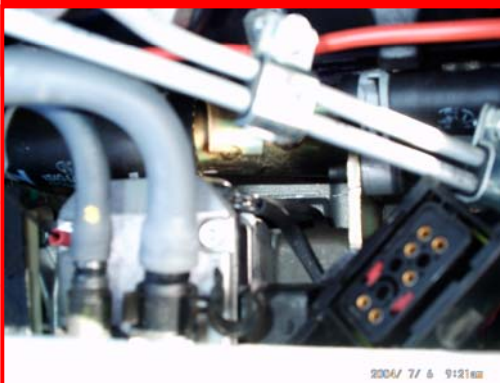

III.1 Engine 1.8TDDI

III.2 Engine VP Pumpe

III.3 Close up VP Pumpe

Opel 1.7, 2.0, 2.2 Ltr. VP-pump with one plug

Before you install the VP-system disable the ignition, because an optical error message in your tachmeter could appear and saved in the motormanagement.

Open the connection plug from the VP-Pump and conjoin the cable harness of the VPC module with the plug from the pump.

Do not lay cable harness parallel to other cables, in particular not parallel to ABS controller connector cables. Keep enough free space as possible. Hold with cable ties.

Now plug the VPC module onto the cable harness.

The system is preset; normally you will not need to readjust the module.

Now fit the engine cover back on. The vehicle is now ready for a test drive.

III.4. VPC Modul
